## PROJECTS

---

### Online Market Place

In our current semester, we, a group of three students have built a website which can manage huge existing market online. This website has three module, one is admin module, one is shopowner module and one is customer module. Each type of users can find benefit from our project  
We've built this project using laravel framework with MySQL database in back-end, and html, css and bootstrap in front-end.

### School Management

In my fourth semester of my university life I made a software for school management. All documents and records of a school can be stored to this and anyone(student and teacher or guardian ) can use this to know more information easily.  
I made this using JavaFx and Oracle database.
